

NOAA ENSO Summary

1. ISSUED BY

CLIMATE PREDICTION CENTER/NCEP/NWS 11 June 2026

2. ENSO ALERT SYSTEM STATUS

El Niño Advisory

3. SYNOPSIS

El Niño conditions are present and expected to strengthen into the Northern Hemisphere winter 2026-27. El Niño conditions developed over the past month, as shown by above-average sea surface temperatures (SSTs) across the central to eastern equatorial Pacific Ocean [Fig. 1].

4. LATEST DATA

The latest weekly Niño-3.4 index value was +0.7°C

5. SST ANOMALIES (FIGURE 01)

Figure 1. Average relative sea surface temperature (SST) anomalies (°C) for the week centered on 3 June 2026. Anomalies are computed with respect to the 1991-2020 base period weekly means.

6. FORECAST MODEL (FIGURE 06)

NWS/NCEP/CPC

Last update: Mon Jun 8 2026
Initial conditions: 28May2026-6Jun2026

Figure 6. NCEP Climate Forecast System (CFSv2) prediction of relative sea surface temperature anomalies for the Niño 3.4 index (5°N-5°S, 170°W-120°W) minus tropical mean (20°N-20°S). The relative index is re-scaled to match the variance of the traditional index. Figure updated 8 June 2026.
